TABLE OF CONTENTS

Problem Statement

- My project addresses the challenge of automatically recognizing and classifying traffic signs from images

- This task is challenging due to variations in lighting conditions, occlusions, and different perspectives.

- Accurate traffic sign classification is essential for ensuring safe driving and reducing accidents on the road.

Main Steps

STEP 1

I chose the dataset related to traffic signs

STEP 2

I used ResNet method for detection and classification

STEP 3

I filtered images to optimize runtime

STEP 4

I achieved the first set of results (acc ~50%)

STEP 5

I increased the number of training images and I varied MBS and NEP (final acc ~99%)

SCHOOL ZONE

RESULTS

- The trained model achieved an accuracy of 85% on the test dataset.

- This task is challenging due to variations in lighting conditions, occlusions, and different perspectives.

- My results demonstrate the feasibility of using ResNet for traffic sign classification.

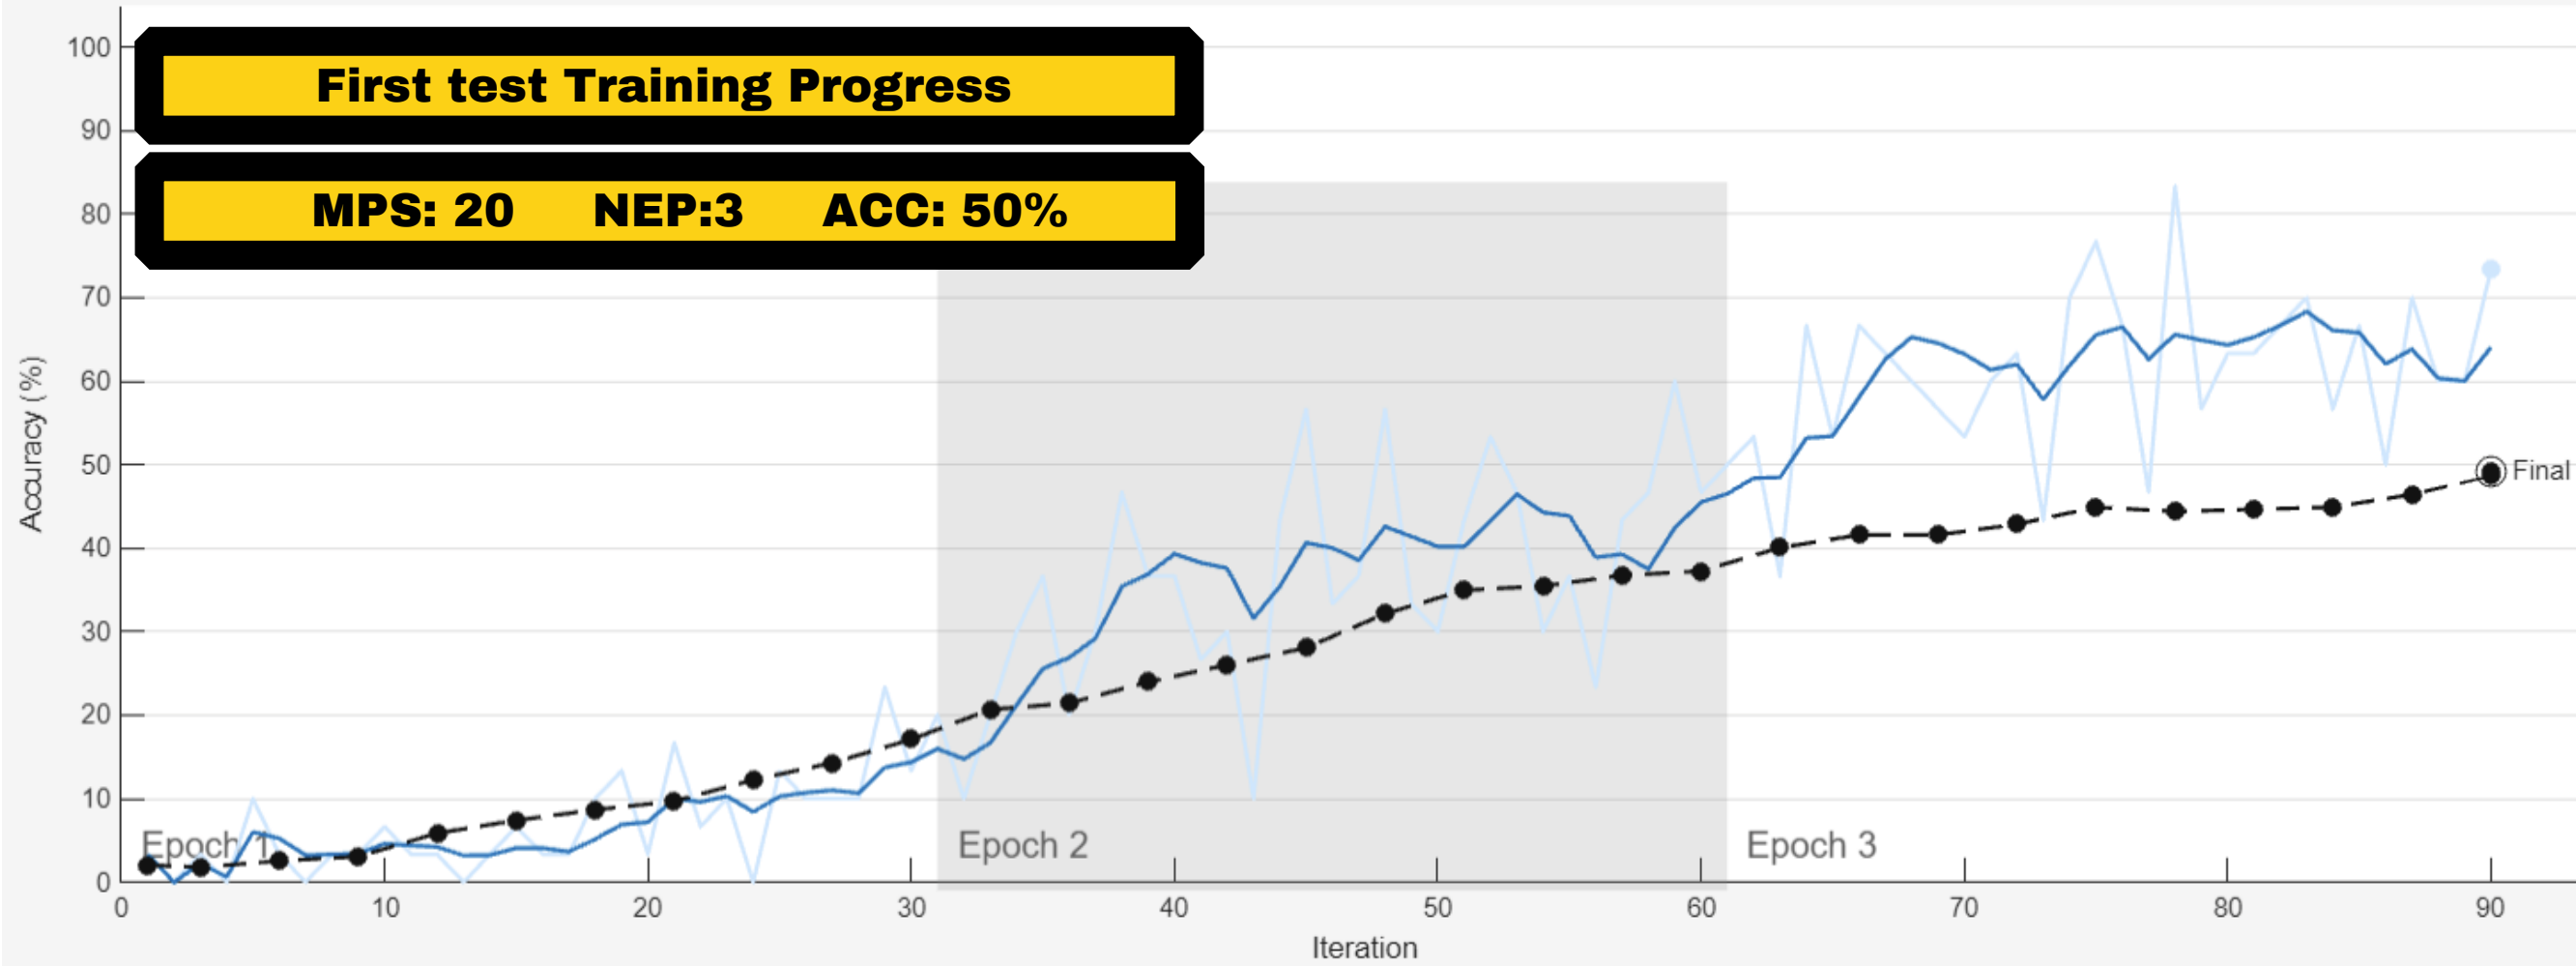

- Future work may involve exploring ensemble methods and deploying the model in real-world applications.

Training Progress (23-May-2024 13:14:07)

First test Training Progress

MPS: 20 NEP:3 ACC: 50%

Results

Validation accuracy: 49.23%
Training finished: Max epochs completed

Training Time

Start time: 23-May-2024 13:14:07
Elapsed time: 37 min 25 sec

Training Cycle

Epoch: 3 of 3
Iteration: 90 of 90
Iterations per epoch: 30
Maximum iterations: 90

Validation

Frequency: 3 iterations

Dataset Overview

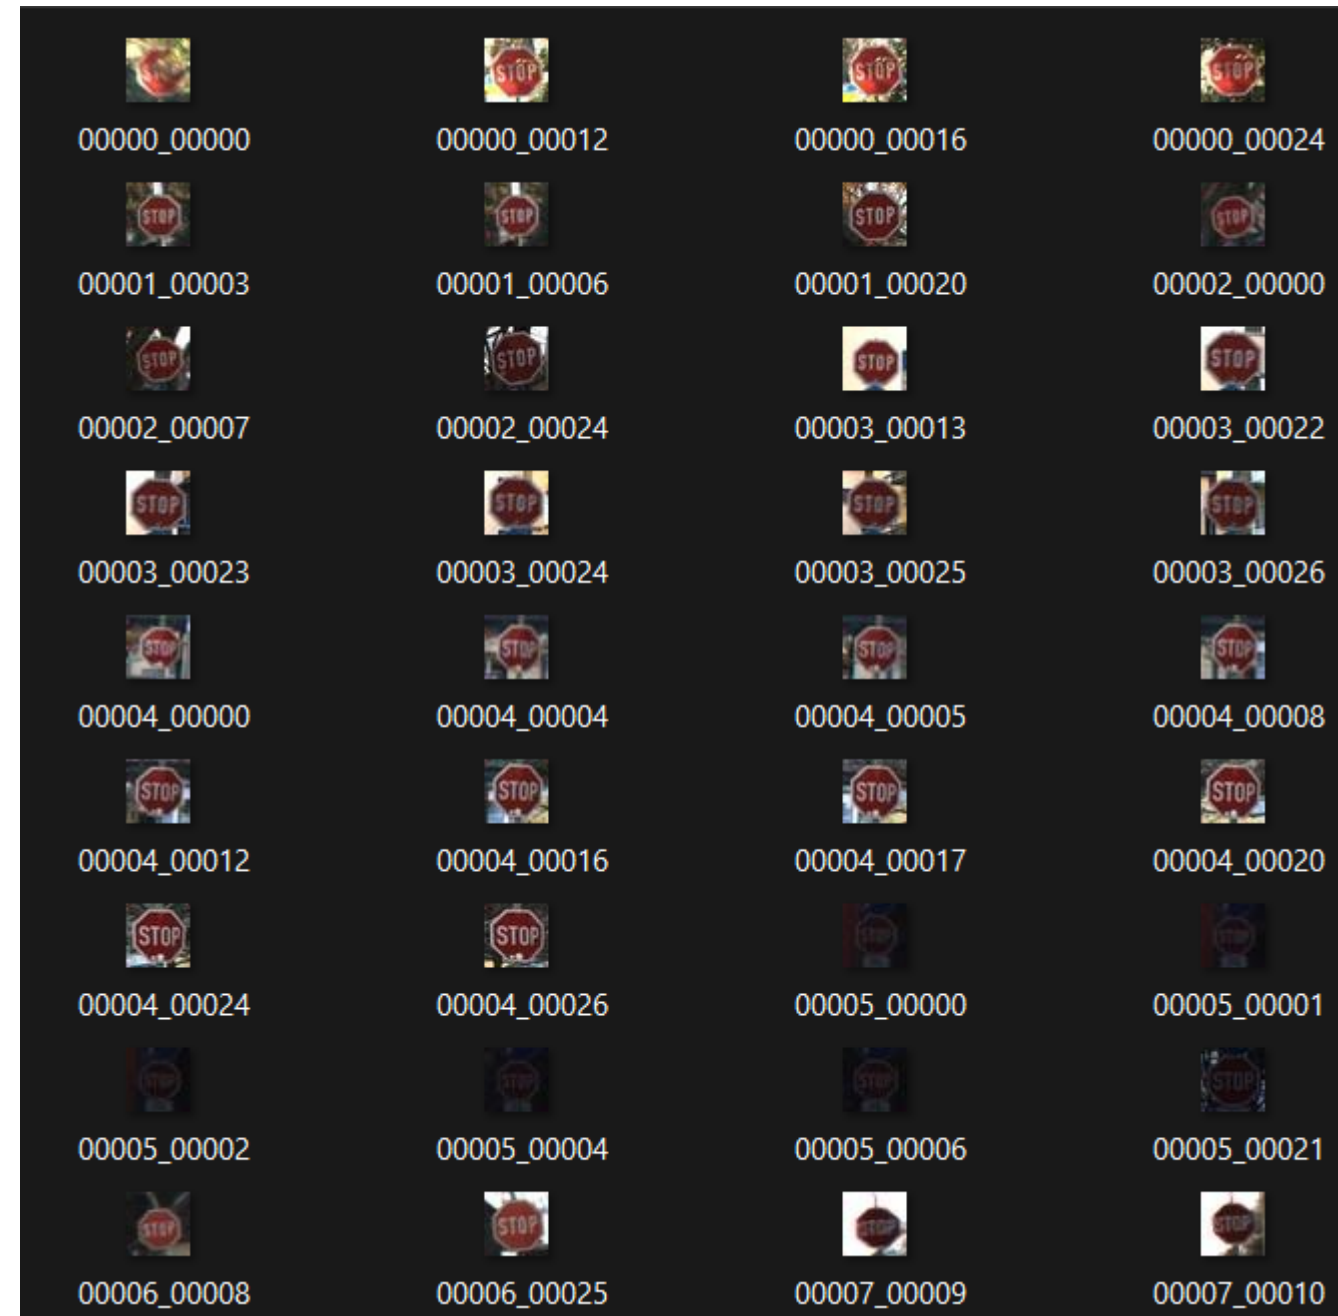

I employed the ResNet (Residual Network) architecture for traffic sign classification.

- ResNet is known for its deep layer representations and residual connections, which help in training deeper networks effectively.
- I used a dataset containing images of various traffic signs, including stop signs, yield signs, speed limit signs, etc.
- The dataset consists of 42 labels with 50-200 images per label.

Dataset Overview

Training Dataset

Testing Dataset

Conclusion

In conclusion, my project highlights the significance of traffic sign detection and classification in enhancing road safety.

I've shown the effectiveness of ResNet in accurately classifying traffic signs, paving the way for further research and development in this field.
